MonicsNet Called Into Action By HISPASAT

Integral Systems, Inc., (Nasdaq: ISYS), has announced that its wholly-owned subsidiary, SAT Corporation, has received a contract from HISPASAT to upgrade the Carrier Monitoring System throughout HISPASAT's network, extending the existing *MonicsNet* network to support the *AMAZONAS 1* and *AMAZONAS 2* communications systems.

MonicsNet is a global monitoring system providing automatic monitoring of **HISPASAT's**

carriers using **SAT Corporation's** *Digital Signal Processing (DSP)* technology. *MonicsNet* technology provides carrier monitoring and interference detection in a fraction of the time of a classic spectrum analyzer. In addition, *MonicsNet's* unique algorithms automatically detect, characterize, and display interfering signals, and allow results to be viewed at any time. The *Monics* system will be devoted to monitoring and detecting interference and/or unauthorized users of the *AMAZONAS* System payloads. HISPASAT, created in 1989, is a global satellite operator offering coverage and service in Europe and the Americas.
